

Two different knees, one identical 8x-undersampled record — the measurement cannot tell x_t from u

target knee x_t (GT)

donor knee x_d (GT)

witness $u = A^\dagger y_t + P_0 x_d$
 $\|Au - y_t\|/\|y_t\| = 2.5e-16$

box-legal witness (POCS)
residual $2.4e-16$
