

Certify what you measure, govern what you cannot

(a) Cannot certify null

true scene x_i

feasible-wrong u

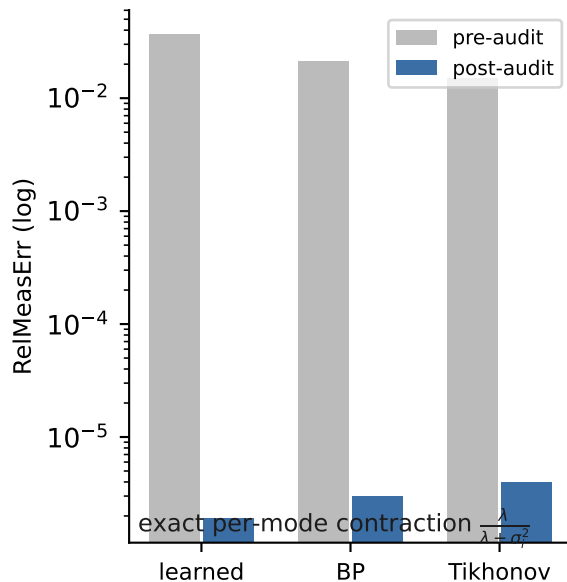

same bucket
 $Au = y_i$

$$\frac{\|Au - y_i\|}{\|y_i\|} \approx 10^{-13}$$

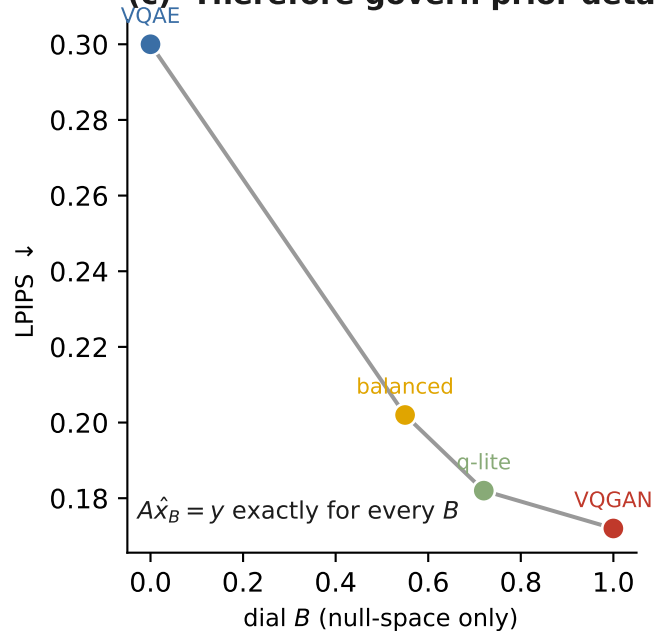

(vs noise floor $\sim 10^{-3}$)

(b) Can audit row record

exact per-mode contraction $\frac{\lambda}{\lambda + \sigma_i^2}$

(c) Therefore govern prior detail

consistency $\neq$ correctness
